</table>
Family violence is a global issue and is not limited to one gender, sexual orientation, religious, cultural or income group.

The Te Whatu Ora – Health New Zealand Waitaha Canterbury is committed to a whole health systems population approach to the issue of child protection, i.e. working across primary and secondary care. This is in recognition that child abuse and neglect are important health issues. They can lead to immediate physical and mental health consequences and are significant precursors to a range of poor health outcomes and long-term conditions. Health care providers are ideally placed for early identification of and intervention in family violence because most people use health services at differing times in their lives.

**Purpose**

The Te Whatu Ora Waitaha recognises that staff competence, and clarity of roles and responsibilities are essential to effective child protection interventions. This supports the accurate detection of suspected and or actual child abuse and neglect, the early recognition of children at risk of abuse and adults at risk of abusing children. This policy seeks to promote and ensure the safety and wellbeing of children and their whanau.

Associated procedures, referral pathways and electronic documentation requirements, e.g. patient management systems, national child protection alert/admin alerts and eProsafe requirements, provide Te Whatu Ora Waitaha community and hospital-based staff with a framework to identify, support, assess and respond to actual and/or suspected child abuse and neglect.

**Principles**

The rights, welfare and safety of the tamaiti/child, are our first and paramount consideration.

Health services should contribute to the nurturing and protection of children and advocate for them as part of their role to promote and preserve health.

Health services for the care and protection of children/tamaiti are built on a bicultural partnership in accordance with the Te Tiriti o Waitangi/Treaty of Waitangi.

Māori children/tamaiti, are assessed and managed within a culturally safe environment. The Māori Health Team/Pukenga Atawhai is available for cultural support.

Wherever possible the whānau/family, hāpu and iwi participate in the making of decisions affecting their tamaiti/child. Their primary role in providing the care, welfare and safety of their children must be valued.

All staff are to recognise and be sensitive to other cultures.

Te Whatu Ora Waitaha provides an integrated service and works with external agencies to provide an effective and coordinated approach to child protection.

Staff are competent in identification and management of actual or suspected abuse and/or neglect through the organisation’s infrastructure including policy and procedural structures, workforce development and access to consultation.

It is important for children/tamaiti that services are provided in environments which are comfortable and appropriate to their needs and age.

Child Protection work is complex and stressful; a consultative and multi-disciplinary approach is considered best practice. Health care workers should not work in isolation.

Early intervention is recognised as best practice to maximise the opportunity for best outcomes.
Applicability

This policy applies to all cases of actual and/or suspected child abuse and neglect encountered by all employees, students and people working at Te Whatu Ora Waitaha under a contract for service.

Definitions

See Appendix 1: Terms and Definitions

Organisational responsibilities

Executive responsibilities

The Te Whatu Ora Waitaha is responsible for ensuring:

- An organisation-wide policy for the management of child abuse and neglect and associated policies is implemented.
- Engagement with interagency processes such as Memorandum of Understanding between Te Whatu Ora Waitaha [formerly Canterbury DHB], Ministry for Vulnerable Children, Oranga Tamariki and the Police that support effective collaboration.
- Processes are in place which reinforce staff compliance with the policy.
- Regular workforce development for staff on the management of child abuse and neglect policy.
- Staff attend workforce development that comprises of Violence Intervention Program (VIP) mandatory core and refresher training. Te Whatu Ora Waitaha requires core training and at a minimum, refresher training every two years, for staff working in the MoH designated areas.
- Adequate support (e.g. access to consultation) and supervision for staff.

These activities need to be properly resourced and evaluated.

Steering Group responsibilities

To meet on a regular basis

To provide guidance and support to the Violence Intervention Programme (VIP) Child and Family Safety Service (C&FSS) / Specialist Mental Health Family Safety Team (SMHF FST).

Participate in reviews and endorse the policy and procedures related to VIP/C&FSS/SMHF FST.

Advise and support the implementation and maintenance of violence intervention services within Te Whatu Ora Waitaha.

Champion the service throughout the Te Whatu Ora Waitaha.

Service responsibilities

All services/departments will support the implementation of this policy within services. Divisions who provide care for children and youth can have divisional level child protection policies based on this policy which reflect their philosophy of care.

Employee responsibilities

All Te Whatu Ora Waitaha employees have responsibility for the management of actual or suspected abuse and neglect. Responsibilities are:
To be conversant with the organisation's management of actual or suspected child abuse and neglect and associated policies.

To understand the referral and management process of actual or suspected abuse and neglect.

To take action when child abuse and neglect is suspected or identified.

It is mandatory to refer to the Child and Family Safety Service (C&FSS)/Specialist Mental Health Family Safety Team (SMH FST) when there is suspected or actual child abuse and neglect of a child.

To contact the C&FSS – phone external 3640905 /internal 80905 or fax external 3641459/ internal 81459.

To contact the SMH FST – phone cell 027 6872 304 or email familiesafetysmhs@CDHB.health.nz

To attend VIP mandatory core and refresher training appropriate to their area of work.

To provide or access Te Whatu Ora Waitaha specialist health services that may include:
- Cultural assessments
- Mental health assessments
- Diagnostic medical assessments
- Social work services, counselling and therapy resources
- Paediatric assessments

To practice safely, for example consulting with a senior colleague during the intervention and seeking peer support/supervision when child abuse is suspected or identified. This includes situations where child abuse is disclosed but the child may not be present (e.g. child of an adult patient).

**People and Capability responsibilities**

Te Whatu Ora Waitaha recruitment policies will reflect a commitment to child protection by including comprehensive pre-employment screening procedures in accordance with the Vulnerable Children’s Act 2014/ Te Whatu Ora Waitaha People and Capability Policies.

Where suspicion exists of child abuse perpetrated by an employee or volunteer, the matter will be dealt with in accordance with the organisations disciplinary procedures, People and Capability Policies.

**Child and Family Safety Service (C&FSS)/Specialist Mental Health Family Safety Team (SMH FST) Responsibilities**

Coordinate Violence Intervention Programme (VIP) implementation within services, working with service leaders to ensure the system supports are readily available.

Ensure the Te Whatu Ora Waitaha-wide policy remains current and aligned with national standards.

Ensure provision of workforce development in accordance with the Te Whatu Ora, Waitaha VIP training plan; this will include ensuring that the VIP training is available cyclically.

Ensure quality improvement activities in regard to policy compliance are undertaken and reported on at least biannually.

Provision of consultation service for staff managing child protection cases.

Provision of peer support for staff who have been involved in the reporting and management of child abuse and/or neglect.

Management of eProsafe child protection and family violence application.

Attendance at multi-disciplinary/multi-agency case management meetings.
Attendance at multi-agency /multi-disciplinary groups working collaboratively to improve and introduce child protection initiative.
Participation in VIP whānau ora meetings and initiatives.
Support implementation of child protection audits.
To facilitate communication with Oranga Tamariki and other key statutory and community agencies.

**Maori, Pasifika and other minorities**

**Māori and the violence intervention programme**

Māori are significantly over-represented as both victims and perpetrators of whānau violence. This should be seen in the context of colonisation and the loss of traditional structures of family support and discipline. However, child abuse and neglect is not acceptable within Māori culture. The Te Whatu Ora Waitaha Management of Child Abuse and Neglect Policy has been developed in accordance with the principles of action including the Te Tiriti o Waitangi/Treaty of Waitangi principles, recognising Te Whare Tapa Wha and kaupapa practices. This is consistent with the eLearning Ministry of Health (MoH) endorsed Foundation course in cultural competency.

Family violence intervention for Māori is based on victim safety and protection being the paramount principle. The Te Whatu Ora Waitaha has Māori staff/services available to offer support to families. Whenever possible an appropriate staff member of the same ethnicity as the tamaiti/child should be involved in decision making and consultation.

*See Appendix 2: Māori and family violence*

**Pacific peoples and the violence intervention programme**

Family violence among Pacific communities in New Zealand occurs in the context of social change brought about by migration, alienation from traditional concepts of the village, family support, extended family relationships and in combination with socio-economic stresses.

Family violence intervention for Pacific peoples is based on victim safety and protection being the paramount principle. Te Whatu Ora Waitaha access Pacific Services to offer support to the family whenever possible.

*See Appendix 3: Pacific peoples and family violence*

**Minority ethnicities/refugees**

Staff need to consider the increased isolation of patients/clients from minority ethnic groups. They may have few support structures outside of the direct family. Different cultures may have different value bases and this may differ from those predominately represented in New Zealand. The potential for minority ethnicities and refugees to identify as being abused and to access help may be difficult.

Staff are to be aware of the potential risks to the abused person when accessing interpreters from ethnic groups. A family member should NOT be used as an interpreter for the victim.
Flowchart for responding to actual or suspected child abuse and/or neglect

VIP Child Abuse and Neglect Intervention Flowchart

Patient presents to health, professional complete initial clinical assessment

- Identification of signs and symptoms (Step 1)
  - Observing child-caregiver interaction
  - Taking a history
  - Reviewing past history
  - Social history
  - Physical examination
- Complete checklist/flowchart

- Validation and support (Step 2)
  - Listen to what you are being told
  - If appropriate, thank them for telling you
  - Let them know that you will act to keep them safe (if needed)

- Health & Risk assessment (Step 3)
  - Mental Health assessment
    - Family & environmental context, e.g. IPV, alcohol & substance misuse, untreated mental health
    - Risk to other children or young people
    - Treat injuries (if applicable)

- Safety Planning (Step 4)
  - If child admitted to hospital with actual or suspected abuse
  - If child is being harmed and/or safety concerns warrant statutory intervention
  - If child at risk but concerns do not warrant a statutory intervention
  - If untreated mental health or alcohol and/or substance misuse
  - If IPV disclosed

- Referral(s) Select all applicable options based on risk identified (Step 5)
  - Referral to Police and Oranga Tamariki (MVCOT)
  - Referral to family support services or The Children’s Team as applicable
  - In consultation refer to appropriate mental health agency
  - IPV intervention including referral to specialist Police Integrated Safety Response Team or specialist service

- Document (Step 6)
  - Document intervention (e.g. history taken, examination findings, risk assessment & referrals)
  - A written referral (e.g. Report of Concern) is required when making a referral to MVCOT

- Seek peer-support or clinical supervision following a child abuse and neglect intervention

#Red pathway for statutory intervention
#Black pathway for non-statutory intervention
#Blue pathway specialist service, eg ISR
#Standard interagency protocol, Memorandum of Understanding between Te Whatu Ora Waitaha, MVCOT, and Police and associated schedule 1
#Consult with the Child and Family Safety Service/Specialist Mental Health Service Family Safety Team and/or an experienced colleague, Paediatrician, MVCOT Liaison Social Worker

SIX STEP CHILD PROTECTION INTERVENTION

This policy outlines the intervention for identifying, assessing, responding to, and referring children who may be victims of violence and/or neglect. Appropriate documentation is also included in the six-step process.

All situations where recent or ongoing child abuse and/or neglect is disclosed, detected or suspected must be acted on and reported using the following procedure.

Routine enquiry about child abuse and neglect is not recommended. Health care providers do however need to respond to a disclosure, or be alert for signs and symptoms that require further assessment, or might indicate child abuse and neglect.

See Appendix 4: Four Recognised Categories of Child Abuse.

See Appendix 5: Signs and symptoms of Abuse and Neglect in Recognised Categories of Child Abuse

Consultation with and referral to key clinical staff is essential, i.e.
- Supervisor/Manager
- Child and Family Safety Service (C&FSS)
- Specialist Mental Health Family Safety Team (SMH FST).
- Te Whatu Ora Waitaha Social Worker
- Paediatrician
- Psychiatrist
- Psychologist
- Oranga Tamariki/Te Whatu Ora Waitaha Liaison Social Worker.
- Mental health case manager or duty person in team.
- Care and Protection Public Health Nurses

It is the health workers responsibility to raise concerns. You do not need absolute proof that child abuse and/or neglect is occurring. A referral to Oranga Tamariki may be made at any time.

All health workers can refer a case for discussion to Child and Family Safety Review Panel's within General Health and Specialist Mental Health. They are interdisciplinary/interagency teams within Te Whatu Ora Waitaha who advise, support and assist staff regarding situations of abuse, alleged abuse or risk of abuse and offer advice on future options.

It is mandatory for all concerns about a child being or likely to be abused by an adult or another child, to be reported/referred to the C&FSS/SMH FST in a timely manner that allows for meaningful consultation.

eProsafe is the Te Whatu Ora Waitaha Child Protection, Intimate Partner Violence, Elder Abuse and Neglect, and Family Violence and Neglect database that is managed by the C&FSS/SMHS FST. A referral to eProsafe is a referral to the C&FSS/SMHS FST to enable advice, further consultation and follow up if required.

See Appendix 12: eProsafe

STEP 1: Identification of signs and symptoms

There is no ‘one-size-fits-all’ approach for the identification of children or young people at risk. The healthcare provider should begin with their first point of concern. However, they should also be aware that if they are concerned about a child all the aspects described in this first step need to be assessed.

The younger and more vulnerable the child (such as a pre-verbal infant), the more important this becomes. For example, a baby caught in the cross-fire of an episode of intimate partner violence (IPV) may need formal physical examination and other investigations for injury, even if they appear physically unharmed.
The policy also applies to the unborn child. Management of risk to the unborn child should occur in close consultation with C&FSS/SMHS FST/Social Work/Maternity Services and the Lead Maternity Carer. Early intervention where care and protection concerns are identified maximises the opportunity for best outcomes. A referral can be made to Oranga Tamariki/ during the antenatal period.

*If there is clear evidence of child abuse or neglect, sufficient in your opinion to justify referral to Oranga Tamariki in its own right, then do not interview the child. Record any information that the child volunteers. If you interrogate the child you may create more problems than you solve.*

**Observing Child–Caregiver Interactions**

Observe the caregiver–child interactions at any clinical encounter; these observations are not ‘diagnostic’, but can provide additional information that may be helpful in determining future courses of action (e.g. by providing clues about who the child is comfortable with and seeks support from, or adults whose behaviour towards the child raises some concerns).

All observations which raise concern should be documented objectively, prospectively and in detail in the clinical record, even if the health care provider is uncertain of their significance at the time. The presence of a documented pattern of concerning behaviours over time may at some stage become very important in enabling the health provider to take effective action on behalf of a child at risk.

Possible cues/signs and symptoms in parent-child interaction

- Lack of emotional warmth, as opposed to strong attachment/bonding
- Dismissive/unresponsive behaviours as opposed to sympathetic/comforting responses
- Interaction between the child and parent or caregiver seems angry, threatening, aggressive or coercive
- Indications that may raise concern are: a parent/caregiver calling the child names, using harsh verbal discipline, telling the child that they will harm something important to the child, threatening to seriously hurt or abandon the child, mocking the child or putting the child down in front of others.

**Taking a history from parents and caregivers**

Your ability to interpret signs and symptoms in a child is reliant on the quality of the history taken from the family and (in some circumstances) the child about those signs and symptoms.

If a child presents with an injury, it is important to understand how that injury occurred. Essential components of the history include the following:

- Who is giving you the history (what is their name and relationship to the child)?
- Who saw it happen (the history should be obtained from an eye-witness, if possible)?
- When exactly did these events occur (time and date)?
- How exactly did they occur? For example, if it was a fall, where did they fall; were they stationary or already moving; how did they fall (head first, feet first, arms out); what was the height of the fall (estimated on the eyewitness’ own body); what surface did they fall onto; what was their position after the fall; were there any complicating factors, like use of a baby walker, or a fall in the arms of an adult?
- When exactly did symptoms begin in relation to the accident? How were they noticed, and who noticed them?

In a young child, it is important to know the developmental capacities of the child. (Can they crawl, pull to stand, climb, run or manage stairs?) It is also important, especially with babies, to know their usual pattern of feeding, sleeping and behaviour, and when that pattern changed.

**Asking children about possible abuse and/or neglect: an area of specialist practice**

If a child has an injury, it is perfectly all right to ask open, non-leading questions, e.g. ‘how did this happen?’ No harm is done by asking the kind of question you would ask of any child you see for treatment of an injury.
If you have concerns about possible abuse or neglect, but there are other possible explanations for the things causing you concern, then seek advice from the Te Whatu Ora Waitaha C&FSS/SMHS FST, on call paediatrician, psychiatrist, psychologist, social worker with experience in child protection, care and protection public health nurse, mental health case manager or Oranga Tamariki.

Privacy is just as important as with adults. Giving an adolescent a chance to talk to you alone should be part of your routine practice. With younger children, you should consider carefully whether or not it is appropriate. A hasty conversation in a gap is unlikely to create the time and space necessary for disclosure by an anxious child.

Use age-appropriate language; children may not know what to say and use different words to express what is going on. You need to create an atmosphere where the child feels safe to talk to you.

**What should be asked?**

If you are going to have this kind of conversation, you need to frame it in a way that makes sense in terms of the signs and symptoms for which the child has come to see you, or in terms of your usual practice. For example: ‘Sometimes when I see children with pain in their tummy like this, it’s because they’re worried or anxious about something. Is there anything that’s making you worried or unhappy?’ Or, ‘One of the things I always do with children who come to see me, when they’re old enough like you, is to check how things are at home.’

It is reasonable to ask open and non-threatening questions, such as:

- How are things at home?
- What happens when people disagree with each other in your house?
- What happens when things go wrong at your house?
- What happens when your parents/caregivers are angry with you?
- Who makes the rules? What happens if you break the rules?

There are no evidence-based ‘screening’ questions for children about sexual abuse; if a presenting symptom has raised this concern for you, then open-ended questions (which do not suggest the answer) are always best.

**Asking adolescent child about possible abuse**

Ask in a place that is private, and confidentiality of information needs to be discussed.

Use a developmentally appropriate assessment if signs and symptoms of abuse are detected. Assessment of the causes of violence in this age group is best accomplished as part of a thorough psychosocial assessment for adolescents such as the HEEADSSS assessment.

If the adolescent child is sexually active, it is important to consider the possibility of non-consenting sexual activity. This should be a part of routine HEEADSSS assessment in adolescents.

**See Appendix 7: HEEADSSS assessment**

**Past history**

Review the child’s clinical record (previous presentations or admissions, particularly multiple presentations for illnesses and injuries, may indicate risk).

Check for the presence of a national child protection alert/admin alert; if a national alert exists, follow the Te Whatu Ora Waitaha Child Protection Alert Policy to access the health information, and take this information into consideration when assessing the child. (If the national child protection alert has been placed by Te Whatu Ora Waitaha access notes from eProsafe. If the national alert was not placed by Te Whatu Ora Waitaha seek information via clinical records.) If an admin alert in SIPICS is present access eProsafe for Te Whatu Ora Waitaha child protection notes.
N.B. the specialist mental health service computer system (SAP) shows national child protection alerts in the patient mast data screen under ‘risk information’ and also in the ‘core information’ screen. eProsafe should be accessed for all assessments.

See Appendix 12: eProsafe

Social history
Take a social history; a variety of factors may have an effect on the risk of child abuse and neglect, e.g. IPV, multiple changes of address; alcohol/drug abuse in the household, a family which actively avoids contact with health care providers or family support agencies, a caregiver with a past history of harming and/or neglecting children; severe social stress; social isolation and lack of support; untreated mental illness.

While these factors are all relevant to the health and welfare of the child, they do not necessarily predict abuse or neglect in any individual case.

Physical examination
A thorough physical examination is indicated in all cases of identified or suspected child abuse and/or neglect, to identify all current and past injuries.

Further investigations may be necessary, but this will depend on the exact circumstances, including the age and developmental capacities of the child, and the type of abuse or neglect that is suspected. For example, a suspected head injury from child abuse in a child under one (even if they have no symptoms of concussion) will almost always require a CT scan of the head, and a skeletal survey will be required in most children under two years with suspected physical abuse and in some older children. Full blood count and coagulation studies may be required in the presence of bruising.

Cases of sexual abuse, or suspected sexual abuse, should always be discussed with a doctor specifically trained in this field. Always refer to Cambridge Clinic for children aged 13 years and above, the Child and Family Safety Service (during working hours) and the Paediatrician on call (after hours) for children 12 years and younger, before you decide whether or not to examine the child.

Consent to examine a competent child (regardless of age) is required before any examination is undertaken. Refer to Te Whatu Ora Waitaha Informed Consent Policy

Using a child protection checklist for children under aged 15 years and younger.
All children 15 years and younger presenting to the Emergency Department should have the Child Protection Checklist as below completed. It is only possible to answer the questions it contains, if you have conducted a thorough assessment following the principles outlined above.

The checklist is only a guide to assist safe process, not a diagnostic algorithm. Never jump to conclusions.

See Appendix 11: Emergency Department Child Protection Checklist

Collection of physical evidence
In some circumstances, collection of physical evidence may assist a criminal investigation (‘forensic evidence’). If you consider that forensic evidence is required, you should be discussing the matter with the C&FSS (during working hours), the Paediatrician on call and the Police.

Steps for collection and safe storage of evidence include:
• Place torn or blood-stained clothing and/or weapons in a sealed envelope or bag (these can be provided by the Police).
• Mark the envelope with the date and time, the patient’s name, and the name of the person who collected the items. Sign across the seal.
• Keep the envelope in a secure place (e.g. a locked drawer or cupboard) until turned over to the Police. Document in your clinical record the time and date that you handed it over, and to whom the envelope was given.

STEP 2: Validation and support

If you have concerns about the safety of a child then you will need to act on these. At some time, someone will need to have a frank conversation with the caregivers and (if old enough to understand) with the child.

While your actions are intended to support and validate the child they may not (depending on the circumstances) be seen as supporting or validating their caregiver(s).

Do not assume that raising care and protection concerns with a family will necessarily result in a hostile reception. Some caregivers may appreciate your honesty and be willing to accept help.

Do not discuss concerns or child protective actions to be taken with a victim’s parents or caregivers under the following conditions.
• If it will place either the child or you, the health care provider, in danger
• If the family may seek to avoid child protective agency staff
• Where the family may close ranks and reduce the possibility of being able to help a child. If safe to do so, you should still be transparent about the actions you as a health care provider need to take, and the reasons for them, but do not divulge details of actions planned by the statutory authorities

Talking with the parents/caregivers of the child

If you are unsure about how to talk with the parents/caregivers; consult with health professionals as appropriate to your area of work i.e. C&FSS, SMHS FST, paediatrician, psychiatrist, psychologist, social worker, mental health case manager, care and protection public health nurse, supervisor/manager,

Basic principles are:
• Create time and space for a private conversation
• Be professional (be calm, start with the facts before you, explain the reasons for your concern and the reasons for the actions you need to take)
• Don’t accuse anyone. For example, if a child has an injury, you have reached the appropriate point in the consultation and have explained the features of the injury that are unusual, you might use phrasing such as “I am concerned that someone may have injured your child”
• Access cultural support, e.g. Māori Health Unit. It is important that contacting such support does not delay any referral to Oranga Tamariki.
• Use interpreters (not family members) if there are language barriers
• Be transparent about what happens next.

If circumstances permit discussing concerns with a victim’s parents or caregivers, follow these principles:
• Broach the topic sensitively
• Help the parents/caregiver feel supported, able to share any concerns they have with you
• Help them understand that you want to help keep their child safe, and support them in the care of their child

Health care provider response to child’s disclosure of abuse

Listen. Do not put words in a child’s mouth. Allow them to tell only as much as they want. Act on the assumption that the child is telling the truth.

Keep any questions to a minimum. Use open ended questions and use age appropriate language.

Do not over-react
Do not panic
Do not criticise
Do not make promises you can’t keep
Ensure the child’s immediate safety. Try not to alert the alleged abuser.

**Health care provider response to parents/caregiver’s disclosure of abuse**

Listen to what the parent or caregiver is saying.

Thank them for telling you.

Let them know that you will act to keep the child safe, and them safe, if they need it.

**STEP 3: Health and risk assessment**

**Risk to the child**

A thorough risk assessment needs to be conducted prior to the development of appropriate intervention plans.

Health care providers are responsible for conducting a preliminary risk assessment with victims of abuse and/or neglect, in order to identify appropriate referral options. Note that this is different from the role of conducting investigations to determine who is responsible for perpetrating the abuse and/or neglect, which is the role of Oranga Tamariki or the Police.

Immediate protection of a child is required if the child has suffered harm which in your view is a result of child abuse, and the environment to which the child is returning is unsafe. Obviously, the more serious the harm and the more vulnerable the child (for example, a baby or a preverbal child), the more critical the risk becomes.

Safe process means:

- Never make decisions about risk in isolation.
- Do not jump to conclusions.
- Consult with experienced staff, e.g. C&FSS/SMHS FST, a paediatrician, a health/mental health social worker, psychiatrist, psychologist, or with the duty social worker at Oranga Tamariki as you work to determine what level of risk the child might be facing.
- Appreciate that other organisations (e.g. Oranga Tamariki) may hold information that is crucial to determining the safety of the child.

You do not need proof of abuse or neglect, and do not need to seek permission from a child’s family, prior to talking with colleagues or an Oranga Tamariki social worker about a child.

Early communication with Oranga Tamariki can help identify if there have been other concerns raised about the safety of the child. It can be considered an additional component of reviewing the child’s history. This early communication does not need to result in a report of concern to Oranga Tamariki, which is a decision that ideally should only be made after a thorough assessment.

**Subsequent children** – Section 18A of the Oranga Tamariki Act 1989, outlines the requirement for parents/caregivers to demonstrate to Oranga Tamariki that they are safe to parent subsequent children when a child has been previously removed from their care or they have been convicted of the murder, manslaughter or infanticide of a child.

If you are aware, or suspect, that a parent or caregiver meets the criteria of 18B or has had a child permanently removed from their care, consult with your C&FSS/SMH FSC and discuss any concerns you have with Oranga Tamariki.
**Mental health assessment**

The health assessment should include an assessment for signs and symptoms of mental health concerns; risk of suicide or self-harm can themselves be symptoms of abuse.

Signs associated with risk of suicide include:
- Previous suicide attempts
- Stated intent to die/attempt to kill oneself
- A well developed, concrete suicide plan
- Access to the method to implement their plan
- Planning for suicide (for example, putting affairs in order)

If you are concerned that the child may be at risk of suicidal behaviour, it is appropriate to ask questions such as:
- “Do you ever think about hurting yourself?”
- “Do you ever feel sad enough that it makes you want to go away and not come back?”
- “Do you ever feel like crying a lot?”

Do NOT ask questions using the words “suicide” or “killing oneself”. These can suggest behaviours that the child may not have thought of.

**See Appendix 8: Assessment and Referral for Children under 12 at Risk of Suicide**

The level of assessed risk (based on the assessment) will inform the referrals required. A referral to the appropriate child or adolescent mental health service may be indicated, but if abuse or neglect issues are also present, referral to Oranga Tamariki is also warranted, particularly if the child cannot be cared for safely within their home. Remember that the most helpful intervention to reduce suicide risk may be to assist the person to obtain safety from the abuse.

**Risk to other children or young people**

Consider possible risk to other members of the family because of the high co-occurrence/entanglement of multiple types of violence within families. This includes establishing the whereabouts and safety of other children in the home.

Oranga Tamariki should be able to determine if previous concerns have been raised about the safety of other children in the family.

**Co-occurrence of intimate partner violence**

If child abuse is identified, assess the victim’s (mother/father/caregiver) safety. Follow the procedure outlined in Intimate Partner Violence (IPV) policy (REF 4616).

Victims of IPV are frequently threatened by the perpetrator that if they disclose the violence, s/he will tell Oranga Tamariki that the non-abusive partner is a bad parent/abusive to the children, and that Oranga Tamariki will take the children away. Careful assessment needs to be undertaken to ensure that children’s disclosure of violence, or the non-abusive partner’s disclosure of violence, leads to further safety for them both, rather than additional trauma through separation or other consequences.

It is recognised that there are occasions when the only way to ensure the safety of a child in a situation of family violence may be to separate the child from the non-abusive parent, even if only temporarily. In these circumstances, best efforts should be made to mitigate the trauma of the separation to both.

**Other risk factors**

If the social history identified other risk factors (see 1.6), then refer to other services, e.g. serious untreated mental illness should be referred to the mental health crisis team (Crisis Resolution), alcohol and drug addiction via referral to Alcohol and Drug Central Coordinator or Community Alcohol and Drug service.
STEP 4: Intervention/Safety planning

If child abuse and/or neglect is identified or suspected, then a plan is required for ensuring the safety of the child, or for providing help and support to the family.

If there are concerns about immediate safety (including your own), contact the Police 111 (or in-house security if available 777) and contact Oranga Tamariki (0508 326 459).

Information from the health and risk assessment process will help to ensure that acute needs are identified and can be included in the safety plan.

All healthcare providers can undertake basic intervention and safety planning activities if they have received training, and have access to support

Note that the purpose of risk assessment is to ascertain the likely level of immediate risk for a patient leaving the health care setting. Actual injuries or other evidence of abuse are not required for referral to Oranga Tamariki, particularly if there is risk to children

Assessing for positive/protective factors, e.g. family’s efforts to actively pursue the safety and well-being of the child and their willingness and capacity to respond or engage, is an important part of identifying resources that may help improve the situation during safety planning

The identification of support needs within the family (e.g. health, education or disability) can be a strength if meeting these needs assists in establishing connections with other services

The tasks at this stage are to:
- Identify the support and safety procedures that are required, e.g. what are the child’s needs for; safety, physical and emotional needs, health and rehabilitation, access to caregivers?
- Specify. What are the support or safety procedures that need to be put in place?
- Allocate responsibilities for action (e.g. who are the key individuals and agencies that need to be engaged?).

In non-critical situations, multiple referral and follow-up pathways are possible. The key issue is whether the child is ‘at risk’ or whether the child is actually already coming to harm.

Child being harmed

A child who, in the opinion of the healthcare provider, is already coming to harm, should be notified to Oranga Tamariki as a ‘report of concern’. Oranga Tamariki will form their own opinion on the level of risk for the child and triage accordingly.

Children admitted to hospital with actual or suspected child abuse or neglect should be managed in accordance with the Memorandum of Understanding (2011) between Te Whatu Ora Regionally, Oranga Tamariki and the NZ Police

And the associated Schedule 1 (Children admitted to hospital with suspected or confirmed abuse or neglect).

https://www.starship.org.nz/media/287445/schedule_one.pdf

Child at risk

Identify the safety, care or behavioural issues that exist. Consider if the risk is likely to be mitigated by the family engaging further with your service, or another health or social agency. Will the family accept this referral? What positive or protective factors exist that could be enhanced?

If you are unsure, discuss the situation and your concerns with Oranga Tamariki to determine if a formal report of concern should be made.
If Oranga Tamariki determine that the whānau is actively pursuing the safety and well-being of the child and has the willingness and capacity to respond then a report of concern to Oranga Tamariki may not be indicated. Likewise if you consider that engagement by an agency with the family is likely to achieve positive outcomes and the family is willing to accept the referral(s), Oranga Tamariki is also likely to suggest that a formal report of concern may not be necessary.

**Co-occurrence of child abuse and Intimate partner violence**
Remember, JOINT safety planning and referral processes need to be implemented when both IPV and child abuse and or neglect are identified.

Any concerns about the safety of the children should be discussed with the abused partner, unless you believe that doing so will endanger the child, another person or yourself. If you or your colleagues decide to notify Oranga Tamariki or the Police Integrated Safety Response (ISR) team, the abused partner should be informed, unless the same concerns apply.

Be aware that actions taken to protect the child may place the non-abusive parent at risk. Always refer this parent to specialist family violence support services, and inform Oranga Tamariki and ISR about the presence of IPV as well as child abuse.

Ask the abused partner how they think the abuser will respond (risk that the abuser will retaliate for disclosure of the family secret).

Ask if Oranga Tamariki has been previously involved, and what the abuser’s reaction was.

If the abuser is present in the health care facility, ask the abused partner whom they would like to inform the abuser about the Report of Concern to Oranga Tamariki and referral to the Integrated Safety Response team, e.g. would they like the health care provider to do it? Does the abused partner want to be present when the abuser is told? Do they want to do it?

Make sure the abused partner has information on how to contact support agencies if problems arise (e.g. Police, Women’s Refuge, Oranga Tamariki).

If the woman is pregnant refer her to C&FSS/SMHS FST/Social Work who will refer to the vulnerable women’s pathway.

**Talking to parents and caregivers about referral to the statutory authorities**
If it is safe to do so, discuss referral to Oranga Tamariki with the child’s parents or caregivers:

- Broach the topic sensitively and reasonably, in the light of the concerns you have.
- Help the parents/caregiver feel supported, able to share any concerns they have with you.
- Help them understand that you want to help keep their child safe, and support them in the care of their child.
- Keep the parents informed at all stages of the process.
- Where options exist, support the parents/caregivers to make their own decisions.
- Involve extended whānau/family and other people who are important to them.
- Be sensitive to, and discuss the patient or caregiver’s fears about Oranga Tamariki.
- However, be clear that your role is to keep the child safe. Do not seek permission to consult with Oranga Tamariki. You may do this at any time.

**See Appendix 9: Legal and Privacy Issues**
At times it may be necessary to suppress patient details and or provide secure processes at the time of discharge. The guidelines for use when staff assess the safety of a victim of abuse to be high risk are outlined in Appendix 10.
STEP 5: Referral and follow-up

Follow-up and referral plans need to be developed for all children and their families, based on the information obtained during the risk assessment and safety planning, and the collaborative planning undertaken.

The tasks at this stage are:

Make referrals as appropriate, and ensure that relevant information is appropriately and accurately transferred to receiving individuals/agencies.

Oranga Tamariki should be notified of all cases where there is actual or suspected harm or safety concerns for child abuse and neglect.

**Child being harmed**

To support follow-up, consider if and how the information should be transferred to the GP (e.g. written discharge summary, telephone call, other procedure, i.e. eProsafe follow up letter to be sent).

Continue to provide follow-up to children and families notified to Oranga Tamariki; Te Whatu Ora, Waitaha remains responsible for the follow-up of the health care needs of the child and family.

**Child at risk**

If you have concerns about risk, but there has been no disclosure, and no definitive signs or symptoms, consult with Supervisor/Manager, an experienced colleague and/or Oranga Tamariki.

Document Child Protection concerns in eProsafe and in clinical record as is appropriate to your service.

There are opportunities for early intervention (even when a report of concern is not made) so:

- Leave the door open for further contact with the child and the child’s caregivers
- Look for further indicators at the next consultation, or consider if you should raise your concerns with others within the health system (e.g. GP, Well-Child provider) so that additional follow-up and support can be offered, if required
- Consider if there are other health, social, or community agencies where you can refer the family to reduce stressors, and/or promote health, e.g. non-health agencies, such as educational or social support agencies (for the child or the parent/caregiver), or agencies that provide support that may alleviate other risks (e.g. budgeting advice, alcohol and drug addiction services, mental health services).
- Consider referring to Right Service Right Time to access an appropriate agency for the whānau/family’s concern(s) in a timely manner.

**For all vulnerable children**

Ensure there is a plan for review and follow-up, e.g. what is the timeframe for the referral and follow-up plan? Who, when, and how, will the plan be reviewed?

When referring to Oranga Tamariki, a written referral (e.g. report of concern) must be sent to Oranga Tamariki and a copy placed in the clinical record of the child (or mother when the concerns reported relate to the antenatal period).

A copy must be entered into eProsafe or sent to the C&FSS/SMHS FPT.

**Co-occurrence of child abuse and intimate partner violence**

Make sure that the abused partner has contact details for local support agencies.

Provide the abused partner with a private area to make phone contact with a family violence service.
STEP 6: Documentation

Thorough documentation on eProsafe and relevant clinical record of all steps of the health consultation is necessary.

Always include the date and time that you saw the child and when you wrote your notes (if different from the time you saw the patient).

Always include name, legible signature and practice designation in the clinical notes.

Clearly and thoroughly document the behaviours, signs and symptoms you observed.

**History**

Document carefully and in detail the history you took, and who you took it from.

If you spoke to the child, write down what you asked, and the child’s answers to your questions. If you spoke to the parent/caregiver, record what you asked, and how the caregiver responded. Use direct quotes where possible.

**Examination**

Note the time and date of examination.

Use simple body diagrams to improve accurate documentation.

Document the following features for each injury: site, shape, size (use a tape measure), characteristics (e.g. colour, depth, edges, surroundings, margins, swelling, tenderness).

Aging of injuries is a difficult and potentially contentious issue, as many factors influence healing such as site of injury, force applied, age and health of patient and infection.

**Photographs**

While consent for physical examination must be obtained for all tamariki/children (regardless of age or competence), separate consent for photography is not required as it forms a part of routine medical documentation when assessing children with unexplained or potentially inflicted injuries. It should however be explained to the family why the photographs are being taken. A separate consent for photographs is only required if the images are intended for education and research purposes (*see Agreement to Clinical Imaging form*).

Note that thorough documentation and body maps are always required and cannot be replaced by photographs.

Photographs may be taken by:

1. Medical Illustrations Department Christchurch Hospital
   - During normal working hours call Medical Illustration, ext.80520.
   - There is no after-hours roster, but Medical Illustrations staff can be contacted after hours through Christchurch Hospital telephone office switchboard to establish if they are available.

2. The doctor undertaking the assessment
   - This must be by the secure messaging application Celo.
   - Name the digital images with the patient NHI.
   - Ideally, incorporate a measuring scale and a staging photograph (which puts each bruise or abrasion in the wider context of the part of the body where it was seen) as well as close-up photographs.
   - If photographs are taken, record the fact in the notes, including the name of the photographer, the time and date and the device on which they were taken.
3. Police – when police are involved/are to be notified and no Medical Illustration photographer is available an option is to discuss availability of a Police photographer.
   - The photographs will be the property of the New Zealand Police.
   - Record in the clinical notes the name and contact details of the Police photographer involved.
   - You can request a copy of the photographs from the Police and may be able to obtain a copy for the hospital record.
   - If you receive the photos electronically contact Medical Illustrations via ext.80520 and ask which staff member to forward them to, so they can be filed in the Medical illustrations system.

Document the results of your risk assessment
Be sure to include suspected or confirmed risk to other family members (e.g. other children in the family, parents or caregivers who may be at risk).

Document the consultative process you undertook
Who did you speak with? At what points?

Document the support agencies, referrals and follow-up plan agreed to
Record the actions taken, referral information offered, follow-up care arranged (e.g. report of concern to Oranga Tamariki, discharge summary to GP, or referral information provided to family for other health and social service agencies).

Note who will take responsibility for follow-up, and when this will occur or inform C&FSS or FST (SMHS) when follow up is not possible.

Confidentiality of abuse documentation on the medical record
Care must be taken to ensure the confidentiality of any information about abuse recorded in any records potentially available to whānau/family members.

If the abuser finds out that the victim has disclosed child abuse/neglect, the victim may be at increased risk of retribution for having revealed this abuse.

Children’s health records are private to them. Parents can ask to access their children’s notes until they are 16 years old, but they are not automatically entitled to them. All requests to access health records should be managed in accordance with Te Whatu Ora Waitaha Release of Patient Information policy there may be grounds for withholding information when the healthcare provider believes that it is not in the child’s best interests to give the parents access.

The health notes for each individual should be stored in a separate file.

Staff support and safety
In any case where staff have been involved in the reporting and/or management of abuse or neglect they should seek debriefing, supervision or counselling from an appropriately trained senior colleague. Staff may access Peer Support or the Employee Assistance Programme and can also access support following a critical incident (see Te Whatu Ora Waitaha Debriefing and Defusing Policy).

Death of a child and sibling assessment
In the event that a child is brought into the Te Whatu Ora Waitaha and is deceased on arrival or the child dies within a Te Whatu Ora Waitaha facility and the cause of death is suspicious, then an assessment of
the safety of any siblings should be urgently undertaken. The Paediatrician on-call should determine if there are other siblings and if so report to Oranga Tamariki. It is also important for the Te Whatu Ora Waitaha to work closely with the Police, and Oranga Tamariki in accordance with the MOU between Oranga Tamariki, the Police and Te Whatu Ora Waitaha, 2011.

Policy measurement

**Clinical Record Audit:** annual audits of clinical records are to be carried out to determine compliance with this policy using an approved VIP audit tools.

Associated documents

Te Whatu Ora Waitaha [Informed Consent Policy](Ref.2400626).
### APPENDIX 1: Terms and definitions

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Child</td>
<td>Unborn children and children aged 0–18 years old.</td>
</tr>
<tr>
<td>Child protection</td>
<td>Means the activities carried out to ensure the safety of the tamaiti/child/rangatahi in cases where there is abuse or risk of abuse.</td>
</tr>
<tr>
<td>Child abuse</td>
<td>Refers to the harming (whether physically, emotionally, or sexually), ill treatment, abuse, neglect, or serious deprivation of any tamaiti/child/rangatahi (Section 14b Children, Youth and their Families Act 1989). This includes actual, potential and suspected abuse.</td>
</tr>
<tr>
<td>Physical abuse</td>
<td>Child physical abuse is any act or acts that may result in inflicted injury to a child.</td>
</tr>
<tr>
<td>Sexual abuse</td>
<td>Child sexual abuse is any act or acts that result in the sexual exploitation of a child, young person, whether consensual or not.</td>
</tr>
<tr>
<td>Emotional/ Psychological abuse</td>
<td>Child emotional/psychological abuse is any act or omission that results in impaired psychological, social, intellectual and/or emotional functioning and development of a child.</td>
</tr>
<tr>
<td>Neglect</td>
<td>Child neglect is any act or omission that results in impaired physical functioning, injury, and/or development of a child.</td>
</tr>
<tr>
<td>Elder abuse and neglect</td>
<td>Elder abuse is the wilful or unintentional harm caused to an older person by another person with whom they have a relationship implying trust. Categories of abuse include financial or material abuse; psychological abuse; physical abuse; and sexual abuse.</td>
</tr>
<tr>
<td>Intimate partner violence <em>(also called partner abuse)</em></td>
<td>Physical or sexual violence, psychological/emotional abuse, or threat of physical or sexual violence that occurs between intimate partners. Intimate partners include current spouses (including de facto spouses), current non-marital partners (including dating partners, heterosexual or same-sex), former marital partners and former non-marital partners.</td>
</tr>
<tr>
<td>VIP Violence Intervention Programme</td>
<td>The MoH VIP Violence Intervention Programme supports health sector family violence programmes throughout New Zealand.</td>
</tr>
<tr>
<td>MEDSAC formerly DSAC</td>
<td>MEDSAC Medical Sexual Assault Clinician Aotearoa National organisation advancing knowledge and improving medical care for those affected by sexual abuse. Only MEDSAC trained practitioners should perform medical examinations for child sexual assault.</td>
</tr>
</tbody>
</table>
| Ministry for Vulnerable Children Oranga Tamariki | Government agency that carries out the legislative requirements of the Oranga Tamariki Act 1989. Responsibilities are:  
- To investigate cases of actual and suspected child abuse and/or neglect  
- To complete diagnostic interviews  
- To complete evidential interviews in cooperation with NZ Police  
- To provide care and protection for children found to be in need |
| New Zealand Police | Government agency responsible for:  
- Working cooperatively with Oranga Tamariki in child abuse and/or neglect protection work  
- Investigating cases of abuse and/or neglect where an offence has or may have been committed  
- Prosecuting offenders where an offence has been committed  
- Accepting reports of suspected abuse and or neglect and referring these to Oranga Tamariki |
eProsafe is a Health electronic application that has been specifically designed to promote the health and wellbeing of children, adults, and their families who are experiencing abuse and neglect. It ensures that frontline staff, managing acute and at times severe situations of violence and abuse, can obtain information held by the Te Whatu Ora Waitaha in a timely manner.

An admin alert can be viewed in patient management systems (in Health Connect South patient summary screen). If the words SCAN notes/Please refer to eProsafe are recorded this indicates to staff that local Child Protection information is held in eProsafe.

N.B. the specialist mental health service computer system (SAP) does not show admin alerts. eProsafe should be accessed for all assessments.

A national child protection alert will be considered for any child up to 18 years of age where child abuse is suspected and/or confirmed and a referral is made to Oranga Tamariki (or OT is involved); a Gateway referral; a Medical Assessment request by Oranga Tamariki; or a pregnant woman where there are identified vulnerabilities.

This alert can be viewed on the National Medical Warning System and local patient management systems (Health Connect South) i.e. TE WHATU ORA WAITAHA CHILD PROTECTION CONCERNS CONTACT TE WHATU ORA WAITAHA CLINICAL RECORDS.

N.B. the specialist mental health service computer system (SAP) shows National Child Protection alerts in the patient mast data screen under ‘risk information’ and also in the ‘core information’ screen. eProsafe should be accessed for all assessments.

Collaboration between Health, Education and Oranga Tamariki. This service assesses the needs of children engaged with Oranga Tamariki.

Police, Oranga Tamariki, Corrections, Health, specialist family violence NGOs and kaupapa Māori services work as a team to support victims. The ISR focuses on the joined-up support and services that families, including victims and perpetrators, receive following family violence reported to NZ Police and high risk prison releases. Cases deemed high risk are discussed further at a weekly intensive case management meeting. Additional agencies involved in planning for these cases are the Ministry of Justice, Accident Compensation Commission, Housing New Zealand, Ministry of Education, Work and Income.

South Island Patient Information Care System is the regional solution for patient information management at Canterbury, Nelson Marlborough, Southern, South Canterbury and West Coast Te Whatu Ora facilities (the South Island Alliance). SI PICS includes patient demographics, appointment booking, waiting list management, patient transfers, record of patient activity, reporting, admission and discharges.
APPENDIX 2: Māori and family violence

This section is drawn from the Family Violence Assessment and Intervention Guideline1. This was developed with leadership from the roopu, Te Korowai Atawhai. This appendix offers some background and context for family violence in relation to Māori, and identifies key principles and actions for effective identification and intervention. To strengthen the way health services respond to Māori individuals who are experiencing violence within their whānau, it is recommended that Te Whatu Ora, regionally continue to implement He Korowai Oranga, the Māori Health Strategy in their planning, governance, ethos, and staff development.

The pathways and principles for action are about ensuring safety and protection, but they are also about supporting families to overcome adversity and draw on their strengths to achieve whānau ora – maximum health and wellbeing.

The experience of family violence for Māori is complex. With the breakdown of traditional whānau structure, loss of beliefs and values, including Te reo Māori, patterns of behaviour have emerged. Violence impacts negatively on whānau, hapū and iwi.

The Violence Intervention Programme (VIP) has developed this programme within the founding principles of Te Tiriti o Waitangi/Treaty of Waitangi. Consultation with the Māori Health Teams has been a valued component of the programme from planning, through the implementation and evaluation phases.

Health professionals have a role to play in supporting individuals from all cultural backgrounds who are experiencing violence within their families by:

- Promoting family environments that are safe and nurturing for children
- Identifying abuse early
- Offering skilled and compassionate support
- Making timely referrals to specialist intervention services.

Solutions to family violence, which are based on traditional Māori values and beliefs (Tikanga) and which involve the wider whānau, may be more likely to achieve the best outcomes. For this reason it is important for health professionals to be able to identify local Māori health providers and ensure that processes are in place to enable Māori individuals and whānau to access this specialist support, should they wish to.

It is important to acknowledge the diversity of Māori individuals and whānau; take the lead from each individual and/or whānau about what their needs and wishes are.

Safety first

While cultural safety and competence is desirable, the safety of women and children should always come first.

Equity of health care for Māori

The Equity of Health Care for Māori: A framework is divided into three areas of action:

Leadership: Championing the provision of high-quality health care that delivers equitable health outcomes for Māori

Knowledge: Developing a knowledge base about ways to effectively deliver and monitor high-quality health care for Māori

Commitment: Providing high-quality health care that meets the health care needs and aspirations of Māori

Health organisations can champion, consider and apply these actions across their practice to facilitate responsive, appropriate and effective care for Māori. This can contribute to improved patient care pathways for Māori patients, and effective identification and response processes to family violence.
Principles for action

Te Tiriti o Waitangi/Treaty of Waitangi/ principles of Partnership, Participation and Protection should underpin efforts to achieve equitable Māori Health outcomes.

Building on the principles of Te Tiriti o Waitangi/Treaty of Waitangi are twelve kaupapa, which health professionals can incorporate into their day-to-day practice to enhance the effectiveness of services for Māori individuals and whānau, and indeed for all people, regardless of cultural or ethnic background.

Wairuatanga – Wairuatanga refers to spirituality. According to Māori, spiritual connections exist between atua (gods and ancestors), nature and humankind. Every child is born with a wairua (spirit), which is subject to damage as a result of mistreatment.

Ways to put this into practice:
Know that spiritual wellbeing is of key importance within Māori models of health. For example, under the Whare Tapa Wha model, wairua, tinana (physical health), hinengaro (mental health), and whānau are all considered vital for health and wellbeing.

Be aware that a person’s wairua (soul or spirit) is likely to have been damaged as a result of emotional, physical and/or sexual abuse. Take care to treat victims of violence with compassion, warmth and respect.

Whakapapa – refers to the genealogical descent of all living things from Ranginui (the Sky Father), Papatuānuku (the Earth Mother), gods, ancestors, and through to the present. Reciting whakapapa enables individuals to identify their genealogical links to one another and to strengthen interpersonal relationships.

Ways to put this into practice
• Note that whakapapa is a fundamental concept of the Māori world-view. Through whakapapa, people can identify and strengthen relationships between themselves and others, develop a healthy sense of belonging, and ground themselves in the world.
• When building and strengthening relationships with Māori individuals, whānau, hapū, iwi or local Māori services, it is beneficial to share with each other information about your genealogical ties and where you and your ancestors come from.

Atuatanga – the qualities and wisdom of atua (gods, ancestors, guardians) are considered to endure through people living in the present.

Ways to put this in to practice
• Acknowledge the rich whakapapa (genealogical heritage) of each individual.
• Be aware that Māori support services in the community may be able to help individuals and whānau who are experiencing violence to reconnect with, and pass on to future generations, the mana (prestige and integrity) and wisdom of their ancestors. Rejecting violence is key to this approach.

Ūkaipōtanga – a Ūkaipō is a place of nurturing and belonging. Ūkaipōtanga is about nurturing and nourishing people and communities.

Ways to put this into practice
• Encourage parents and whānau to provide a safe and nurturing environment for their children. For example, within maternity services, promote and support parent-infant bonding and talk to parents about how to respond safely to a crying baby.
• Help parents connect with services in their community that can support them in their role as caregivers and protectors.
• Ensure that your health service supports victims of violence within whānau.
**Whānaungatanga** – focuses on the importance of relationships. Individuals are seen as part of a wider collective, which has the potential to provide its members with guidance, direction and support.

**Ways to put this into practice**
- Recognise the role of the whānau (family and extended family) in the life of each individual.
- Engage and build relationships with whānau, identifying key people of influence and those who can provide strength and support to individual members (such as kaumatua and kuia).
- Note that an individual who is experiencing family violence may wish to call on the support of someone outside their whānau.
- Help whānau to participate in informed planning and decision making.
- Work in partnership with whānau, hapū, iwi and Māori community organisations to provide support for individuals experiencing violence.

**Rangatiratanga** – is about demonstrating the qualities of a good leader (rangatira); altruism, generosity, diplomacy and the ability to lead by example. It can also refer to the concept of self-determination, which respects the right of an individual or group of people to lead themselves. He Korowai Oranga – Māori Health Strategy acknowledges whānau, hapū, iwi and Māori aspirations for Rangatiratanga.

**Ways to put this into practice**
- Demonstrate integrity and respect when engaging with whānau.
- Respect the right of individuals and whānau to determine their own solutions. Support them to make well-informed decisions. Allow them time to ask questions and explore options for action.
- Ask open-ended questions about what plan of action individuals and/or whānau would like to take, and offer resources, support and guidance.
- Ask the whānau (rather than assume) what tikanga and kawa (cultural protocols) they wish to follow. Honour their decisions wherever possible.

**Manaakitanga** – is about nurturing and looking after people and relationships. Here action is taken to enhance the mana (prestige and integrity) of each individual. Relationships are based on compassion, generosity, reciprocity and respect.

**Ways to put this into practice**
- Build trust with Māori individuals and whānau from the first point of contact.
- Convey a genuine, open, supportive, caring and respectful attitude.
- Offer a comfortable and welcoming environment for Māori (including the physical environment and the behaviour and attitudes of health professionals).
- Aim to pronounce Māori names and words correctly. This will convey a sense of care and respect. If you are not sure how to pronounce someone’s name, ask.

**Kaitiakitanga** – refers to the guardianship or protection of people, taonga (cultural treasures), and the environment so that they continue to thrive from generation to generation.

**Ways to put this into practice**
- Recognise that safety should always be the number one priority. Ensure processes are in place to keep all vulnerable people, and staff safe.
- Be aware that the physical, emotional and spiritual safety/wellbeing of mothers is important for the safety of their children.
- Respect and enable (wherever possible) the expression of Māori and other cultural practices and beliefs.
- In order to safeguard present and future generations, ensure that there is a sustained commitment within your practice to address violence within whānau.
Oritetanga – refers to equality.

Ways to put this into practice
- Deliver the same high quality service to everyone, no matter what their age, gender, ethnicity or social background.
- Understand that some whānau may have minimal information about the health sector and your role may be to empower and inform them of their rights and responsibilities.

Kotahitanga – exists when people work together in unity to support and achieve common goals.

Ways to put this into practice
- Take a collaborative approach to keep victims of violence within whānau safe. This should involve information sharing and planning with other professionals, community providers and whānau members.
- Build a sense of partnership with whānau, hapū and iwi, and Māori organisations in your community.

Pukengatanga – involves the achievement of progressive milestones and skills, enabling individuals to reach their goals and their potential.

Ways to put this into practice
- Work with the individual, whānau, and other professionals (where relevant) to identify achievable plans to ensure short, medium and longer term safety for victims of family violence. After short term safety is established, support them to take the next step.
- Ensure that individuals/whānau are aware of their options so that they have the opportunity to make informed choices and develop their own plans for the future.

Te Reo – refers to the Māori language, which is an official language of New Zealand. Its preservation is essential as it is through language that Māori beliefs and traditions are passed from generation to generation. Te Reo carries with it the ‘life force’ (mauri) of the culture.

“Ko Te Reo Te mauri o Te mana Māori – The language is the life essence of Māori mana.” Sir James Henare (1979)

Ways to put this into practice
- Aim to pronounce Māori names and words correctly. This will convey a sense of care and respect. If you are not sure how to pronounce someone’s name, ask.
- Use Te Reo in signage and posters, and have key documents and resources available in Te Reo.
- Embrace opportunities to learn and use Te Reo and to understand the meanings of key Māori concepts (such as these 12 kaupapa).
- Be aware that Māori words often have multiple layers of meaning and convey perspectives and concepts that cannot always be directly translated into English.

The Increasing Violence Intervention Programme (VIP) Programmes’ Responsiveness to Māori resource encourages health care providers to seek training to enhance their cultural competence when working with Māori.

APPENDIX 3: Pacific peoples and family violence

This section draws on Nga Vaka o Kāiga Tapu (Ministry of Social Development Taskforce for Action on Violence within Families 2012), a conceptual framework, for addressing family violence in seven Pacific communities in New Zealand. Nga Vaka o Kāiga Tapu aims to assist practitioners and service providers, and mainstream organisations working with Pacific families, in:

- Their work with victims, perpetrators and their families who have been affected by family violence
- Grounding their experiences and knowledge in elements of an ethnic-specific culture in ways that are relevant to the diverse experiences of the families.

What family violence means in a Pacific context

Violence was defined by the working group for Nga Vaka o Kāiga Tapu as violations of tapu (forbidden and divine sacredness) of victims, perpetrators and their families. Violence disconnects victims and perpetrators from the continuum of wellbeing, and transgresses the tapu.

Risk factors for family violence amongst Pacific people

The following factors that contribute to family violence in a Pacific context:

- Situational factors: including socioeconomic disadvantage, migration culture and identity.
- Cultural factors: including beliefs that women are subordinate to men; perceptions and beliefs about what constitutes violence; (mis)interpretation of concepts, values and beliefs about tapu relationships between family members including children and the elderly; unresolved historical and intergenerational issues; fusion of cultural and religious beliefs and their (mis)interpretations.
- Religious factors: including (mis)interpretations of biblical texts; fusion of cultural and religious beliefs and their (mis)interpretations.

Protective factors for Pacific families

Reciprocity
Respect
Genealogy
Observance of tapu relationships

Language and belonging are concepts that are shared across the seven ethnic specific communities as elements that protect and strengthen family and individual wellbeing.

Transformation and restoration

Education is identified as a critical process for transforming violent behaviour and restoring wellbeing to families. It is the responsibility of both practitioners and the communities. The following are four important features that must be practiced together when delivering an education programme aimed at building and restoring relationships within families:

- Fluency in the ethnic-specific and English languages.
- Understanding values.
- Understanding the principles of respectful relationships and the nature of connections and relationships between family members within the context of ethnic-specific cultures.
- The correct understanding and application of strengths-based values and principles.
Principles for action

**Victim safety and protection must be paramount**
The safety of the victim must be paramount. Any practices or interventions that health care providers engage in should not further endanger or disadvantage a Pacific victim of family violence (FV).

Actions and behaviours to ensure victim safety and protection:
- Wherever possible, involve the person in determining the plan of action they would like to take.
- Your communication style is important. Your language and tone should convey respect and a non-judgmental attitude. Preferably communicate in the language of the victim.
- Affirm the person’s right to a safe, non-violent home.
- Offer referral to either specialist Pacific or mainstream family violence advocates.

**The provision of a Pacific-friendly environment**
The first point of contact is important in building trust, together with an atmosphere that conveys openness, caring and one that will not judge. Some Pacific peoples will have English as a second language, so communicate simply and clearly; or provide assistance from an appropriately trained (non-family) person who speaks the same language.

Actions and behaviours that contribute to Pacific people feeling comfortable:
- Start your consultation with some general conversation; do not be too clinical and business-like.
- Convey a genuine attitude that is gentle, welcoming, caring, non-judgmental and respectful – first contact is vital.
- Do not rush – leave time to think about and respond to questions.
- Ask open-ended questions.
- Offer resources and support that meets the ethnic-specific needs of the victim.

**The provision of culturally safe and competent interactions**
Health care providers are encouraged to seek training to develop their cultural safety and competence in working with Pacific peoples.

Actions and behaviours that contribute to the development of culturally safe and competent interactions:
- Be cognisant of the factors contributing to FV for Pacific peoples.
- Identify and remove barriers for Pacific victims of FV accessing health care services.
- Develop knowledge of referral agencies appropriate for Pacific victims of violence.

**A collaborative community approach to family violence should be taken**
The implementation of interventions for Pacific victims of FV should occur in collaboration with other agencies or sectors to ensure that the needs of Pacific victims of violence are adequately addressed.

Actions and behaviours that contribute to a collaborative intersectoral approach:
- Recognise that for solutions to be meaningful to Pacific victims of FV, other sectors may need to be involved.
- Take the time to know your local community and FV referral agencies. If possible, offer referral to Pacific advocates with expertise in FV.
- Do not assume that the family or church should be involved in supporting the Pacific victim of FV – ask what plan of action they want (it may or may not include the family and the church).
APPENDIX 4: Four recognised categories of child abuse

These frequently overlap in individual cases. Refer to the “Recognition of Child Abuse and Neglect” published by the Risk Management Project, Children/young person’s and Their Families Agency 1997.

**Physical abuse**
Child physical abuse is any act or acts that may result in inflicted injury to a child. It may include, but is not restricted to:
- Bruises and welts
- Cuts and abrasions
- Fractures or sprains
- Abdominal injuries
- Head injuries
- Injuries to internal organs
- Strangulation or suffocation
- Poisoning
- Burns or scalds
- Non organic failure to thrive
- Fabricated or induced illness by carers (formerly Munchausen Syndrome by Proxy)

**Sexual abuse**
Child sexual abuse is any act or acts that result in the sexual exploitation of a child whether consensual or not. It may include, but is not restricted to:

*Non-contact abuse*
- Exhibitionism
- Voyeurism
- Suggestive behaviours or comments
- Exposure to pornographic material
- Inappropriate photography

*Contact abuse*
- Touching breasts
- Genital/anal fondling
- Masturbation
- Oral sex
- Object or finger penetration of the anus or genitalia
- Penile penetration of the anus or genitalia
- Encouraging the child to perform such acts on the perpetrator
- Involvement of the child in activities for the purposes of pornography or prostitution

**Emotional/Psychological abuse**
Child emotional/psychological abuse is any act or omission that results in impaired psychological, social, intellectual and/or emotional functioning and development of a child. It may include, but is not restricted to:
- Rejection, isolation or oppression.
- Deprivation of affection or cognitive stimulation.
- Inappropriate and continued - criticism, threats, humiliation, accusations, expectations of, or towards, the child.
- Exposure to family violence.
- Corruption of the child through exposure to, or involvement in, illegal or anti-social activities.
- The negative impact of the mental or emotional condition of the parent or caregiver.
- The negative impact of substance abuse by anyone living in the same residence as the child.

**Neglect**

Child neglect is any act or omission that results in impaired physical functioning, injury, and/or development of a child. It may include, but is not restricted to:

- **Physical neglect** – failure to provide the necessities to sustain the life or health of the child.
- **Neglectful supervision** – failure to provide developmentally appropriate and/or legally required supervision of the child leading to an increased risk of harm.
- **Medical neglect** – failure to seek, obtain or follow through with medical care for the child resulting in their impaired functioning and/or development.
- **Emotional neglect** – not giving children the comfort, attention and love they need through play, talk, and everyday affection.
- **Educational neglect** – allowing chronic truancy, failure to enrol children in school, or inattention to special education needs.
- **Abandonment** – leaving a child in any situation without arranging necessary care for them and with no intention of returning.
- **Refusal to assume parental responsibility** – unwillingness or inability to provide appropriate care or control for a child.
APPENDIX 5: Signs and symptoms of abuse and neglect in recognised categories of child abuse

Physical abuse: injuries that don't make sense

- **Unexplained head injuries** – even an apparently trivial bruise to the head of a baby or young infant with no evident signs of concussion may be reason for concern
- **Unexplained bruises, welts, cuts and abrasions** – particularly in unusual places (face, ears, neck, back, abdomen, buttocks, inner arms or thighs, back of the leg), clustered, patterned or in unusually large numbers
- **Any unexplained bruise or injury in a baby who is not yet independently mobile** – especially if they are not yet pulling to stand, crawling or walking. Fractures in babies are often not clinically obvious, and may present as reluctance to use one limb or to crawl, or with non-specific irritability.
- **Unexplained fractures** – many children get accidental fractures, but always consider whether the history is consistent with the fracture type. This depends entirely on the quality of the history you take.
- **Unexplained burns** anywhere on the body. Burns may be difficult to interpret, and if you are concerned they should be referred early to a Pediatrician.
- **The child or their parent** can’t recall how the injuries occurred, or their explanations change or don’t make sense. While there may be innocent explanations for this, ‘no history of trauma’ is a common feature of child abuse.

Sexual abuse

In sexual abuse particularly, physical signs or symptoms are usually absent and behavioural changes may not be evident.

If a child tells you they have been abused (i.e. ‘makes a disclosure’), this should always be taken seriously and referred to Oranga Tamariki.

Anogenital symptoms in children (like redness or swelling, bruising or bleeding from the genital or anal area) do not necessarily indicate sexual abuse, but they do need to be evaluated by a doctor with the appropriate expertise. Most urinary tract infections in childhood are not related to sexual abuse. However, if you or the family have concerns about sexual abuse for these or other reasons, the child should be referred as soon as possible to a doctor trained in the area of child sexual abuse.

Behaviour changes after sexual abuse may not be evident and if they do occur they may be highly variable. Concern may exist if there is:

- **Age-inappropriate sexual play or interest** and other unusual behaviour, like sexually explicit drawings, descriptions and talk about sex. However, this does not necessarily indicate sexual abuse, and should be discussed with clinicians experienced in child behaviour or child sexual abuse.
- **Fear of a certain person or place**. Children might try to express their fear without saying exactly what they are frightened of, so listen carefully, and take what they say seriously. However, never jump to conclusions.
- Other behavioural change suggesting emotional disturbance (see below).

Emotional abuse

Most forms of abuse, exposure to violence or neglect are accompanied by emotional effects, which may or may not cause behavioural changes. The changes in behaviour noted below are not however specific for the emotional consequences of abuse or neglect.

- **Sleep problems** like bed-wetting or soiling – with no medical cause, nightmares and poor sleeping patterns.
- **Frequent physical complaints** – real or imagined, such as headaches, nausea and vomiting, and abdominal pains
• Signs of anxiety
• Other altered behaviour. Children who are abused may withdraw, present as sad and alone, or consider hurting themselves or ending their lives. Some children may develop conduct disorder, such as oppositional or aggressive behaviour, acting out or deteriorating school performance.

**Neglect**

Neglect is one of the most common forms of child maltreatment, with serious long-term consequences for children, but can be very difficult to define. It is useful to consider:

• Do the conditions or circumstances indicate that a child’s basic needs are unmet?
• What harm or risk of harm may have resulted?

These questions cannot be answered without sufficient information. This includes the pattern of caregiving over time, how the child’s basic needs are met (or not met) and whether there have already been specific examples when an omission of care has led to harm or the risk of harm.

Neglect can consist of:

• **Physical neglect** – not providing the necessities of life, like a warm place enough food and clothing. In babies or young children, this may present as poor growth ('failure to thrive')
• **Neglectful supervision** – leaving children home alone, or without someone safe looking after them during the day or night
• **Emotional neglect** – not giving children the comfort, attention and love they need through play, talk and everyday affection
• **Medical neglect** – the failure to take care of their health needs.

• If neglect of medical care is identified or suspected refer to Schedule Three Guideline for the Neglect of Medical Care within the Memorandum of Understanding between Te Whatu Ora [formerly DHBs], Police and Oranga Tamariki [link]

• **Educational neglect** – allowing chronic truancy, failure to enrol children in school or inattention to special education needs.

*See Appendix 6: Child Neglect Assessment Guideline*
APPENDIX 6: Child neglect assessment guideline

Two primary questions should be asked in order to identify whether child neglect has occurred:
- Do the conditions or circumstances indicate that a child’s basic needs are unmet?
- What harm or threat of harm may have resulted?

To answer these questions, sufficient information is required to assess the degree to which neglect can or may result in significant harm or risk of significant harm. The decision often requires considering patterns of caregiving over time. The analysis should focus on examining how the child’s basic needs are met and on identifying situations that may indicate specific omissions in care that have resulted in harm or the risk of harm to the child. While information on all these domains will not be accessible to all health care providers, the list provides some indications of issues that may require consideration.

Further questions which may indicate that a child’s physical or medical needs and supervision may be unmet include the following:
- Have the parents or caregivers failed to provide the child with needed care for a physical injury, acute illness, physical disability or chronic condition?
- Have the parents or caregivers failed to provide the child with regular and ample meals that meet basic nutritional requirements, or have the parents or caregivers failed to provide the necessary rehabilitative diet to a child with particular health problems?
- Have the parents or caregivers failed to attend to the cleanliness of the child’s hair, skin, teeth and clothes? Note: It can be difficult to determine the difference between marginal hygiene and neglect. Health care providers should consider the chronicity, extent and nature of the condition, as well as the impact on the child.
- Does the child have inappropriate clothing for the weather? Health care providers should consider the nature and extent of the conditions and the potential consequences to the child. They also must take into account diverse cultural values regarding clothing.
- Does the home have obviously hazardous physical conditions (e.g. exposed wiring or easily accessible toxic substances) or unsanitary conditions (e.g. faeces- or trash-covered flooring or furniture)?
- Does the child experience unstable living conditions (e.g. frequent changes of residence or evictions due to the caretaker’s mental illness, substance abuse or extreme poverty)?
- Do the parents or caregivers fail to arrange for a safe substitute caregiver for the child?
- Have the parents or caregivers abandoned the child without arranging for reasonable care and supervision?

The effects of neglect are as bad as, if not worse than, physical and sexual abuse. They include serious long-term disorders of attachment and behaviour, delays in cognitive and emotional development, mental health disorders, substance abuse, risk-taking sexual behaviour, violence and educational and employment failure.

*All children should be carefully monitored (with repeated checks) by health care staff in all inpatient settings to avoid suicide in these environments.*
APPENDIX 9: Legal and privacy issues

Since the introduction of the Privacy Act (1993) and the Health Information Privacy Code (1994), agencies and individuals have become concerned about how much information can be given to statutory social workers or the Police. Both documents make provision for the disclosure of information necessary to prevent harm to any individual.

As well, all privacy restrictions are over-ridden by certain sections of the Oranga Tamariki Act (1989). These provide for the reporting of child abuse, protection of an individual from proceedings when disclosing child abuse to either a statutory social worker or police, and government agency obligations.

Te Whatu Ora Waitaha encourages good communication between Te Whatu Ora Waitaha staff and Oranga Tamariki or the police to keep children safe. Requests for information should be referred directly to the Te Whatu Ora Waitaha Patient Information Service who are responsible for ensuring such requests are dealt with promptly and appropriately. Information must only be released to a Oranga Tamariki social worker, police officer or care and protection coordinator (s66 Oranga Tamariki Act: see below).

Te Whatu Ora regionally is therefore, able to give information to Oranga Tamariki or the Police when reporting abuse or when requested by either agency.

CHILDREN, YOUNG PERSON’S AND THEIR FAMILIES ACT 1989

56 Paramountcy principle

... [the] welfare and interests of the child or young person shall be the first and paramount consideration.

515 Reporting of ill treatment or neglect of a child

Any person who believes that any child has been, or is likely to be, harmed (whether physically, emotionally, or sexually), ill-treated, abused, neglected, or deprived may report the matter to a social worker or a member of the police.

516 Protection of person reporting ill treatment or neglect of a child

No civil, criminal, or disciplinary proceedings shall lie against any person in respect of the disclosure or supply, or the manner of the disclosure or supply, by that person pursuant to section 15 of this Act of information concerning a child (whether or not that information also concerns any other person), unless the information was disclosed or supplied in bad faith.

566 Government Departments may be required to supply information

(1) Every Government Department, agent, or instrument of the Crown and every statutory body shall, when required, supply to every Care and Protection Co-ordinator, Oranga Tamariki social worker, or member of the police such information as it has in its possession relating to any child where that information is required -

(a) For the purposes of determining whether that child is in need of care or protection (other than on the ground specified in section 14 (1)(e) of this Act): or

(b) For the purposes of proceedings under this part of this Act.

Section 66 means that where a care and protection coordinator, Oranga Tamariki social worker or police officer requires information about a child for the purposes of determining whether the child is in need of care and protection, or for proceedings under the Oranga Tamariki Act 1989, Te Whatu Ora staff must provide that information. A staff member may be asked to provide this information in an affidavit. Te Whatu Ora Waitaha recommends that the staff member seeks the support and advice of the unit manager, C&FSS/SMH FSC and/or the organisations legal adviser.
PRIVACY ACT

*Principle 11 (f) (ii)*

An agency may disclose information if that agency believes, on reasonable grounds that the disclosure of the information is necessary to prevent or lessen a serious threat to the life or health of the individual concerned or another individual.

**PRACTICE NOTE: INTERAGENCY INFORMATION SHARING**

**HEALTH INFORMATION PRIVACY CODE**

*Rule 11 subsection 2 (d) (ii)*

An agency that holds personal information must not disclose the information to a person or body or agency unless – the disclosure of that information is necessary to prevent or lessen a serious and imminent threat to the life or health of the individual concerned or another individual.

**HEALTH ACT 1956**

*Section 22 (2) (c) Disclosure of health information*

Any person being an agency, that provides health services or disability services ... may disclose health information ... to a social worker or a Care and Protection Coordinator within the meaning of the Oranga Tamariki Act 1989, for the purposes of exercising or performing any of that person’s powers under that Act. Always seek advice prior to release of information (refer to Privacy policies)

**VULNERABLE CHILDREN ACT 2014**

The Vulnerable Children Act (VCA) forms a significant part of comprehensive measures to protect and improve the wellbeing of vulnerable children and strengthen New Zealand’s child protection system.

The reforms within the VCA were proposed in the White Paper for Vulnerable Children, and confirmed in the Children’s Action Plan, which was released in October 2012 after significant public consultation.

The Action Plan and the VCA are based on the premise that cross-sector collaboration and responsibility is essential to protecting vulnerable children. Chief executives from five government agencies are jointly accountable for implementing the Children’s Action Plan.

Relevant provisions within the VCA include: requirements for government agencies and their funded providers to have child protections policies, and standard safety checking for paid staff in the government-funded children’s workforce.

*Part 2*, covering child protection policies, states:

The purpose of this Part is to require child protection policies (that must contain provisions on the identification and reporting of child abuse and neglect) to be –

(a) Adopted and reported on by prescribed State services and DHBs boards; and

(b) Adopted by school boards; and
(c) Adopted by certain people with whom those services or boards enter into contracts or funding arrangements.

It is appreciated that DHBs already have child protection policies in place, as part of the VIP and their wider commitment to identifying and responding to child abuse and neglect.

**Part 3**, covers children’s worker safety checking, and provides:

The purpose of this Part is to reduce the risk of harm to children by requiring people employed or engaged in work that involves regular or overnight contact with children to be safety checked.

The VCA contributes to the Government’s Better Public Services result to reduce the number of physical assaults on children.

The requirements of the VCA should complement and strengthen the implementation of the VIP within the public health setting.
APPENDIX 10: Safety and security guidelines

This guideline sets out Te Whatu Ora Waitaha’s procedures for staff when there is a need to access support to optimise the safety for victims of family violence when the risk to the victim’s safety is assessed to be a high risk. These guidelines will provide information to support staff to:

- Ensure persons making public enquiries about the victim are given no details by suppressing all details on the hospital computer.
- Use a safe process to discharge the family to an advocacy agency, e.g. women’s refuge. This may include informing an inquirer that the patient has left the hospital before this is so and/or denying knowledge of where the patient has gone.

Procedures outlined in this policy should be discussed with the patient/client who is the victim of abuse and their consent obtained.

The safety of the patient is the paramount consideration. If a patient who is a victim of child abuse and/or neglect, expresses fear of the perpetrator or others, s/he is likely to be correct. It is defensible in this case for hospital staff to refuse public access to patient details and to facilitate the patient leaving the hospital for a place of safety.

Procedure to establish name suppression for victims of abuse in the DHB computer system ensuring persons making public inquiries are given no details about the victim

1. The guardian of/or victim of abuse identifies that s/he is concerned that the perpetrator may trace them to the hospital.
2. The staff member discusses with the victim/guardian the potential to place name suppression on the patient’s details. The victim/guardian consents to this name suppression being actioned.
3. The Shift Co-ordinator/Team Leader/Clinical Charge Nurse is informed and s/he directs the Unit Receptionist to place the ‘No details to be released’ flag against the patient details on the patient inquiry screen. Only the Shift Co-ordinator/Team Leader/Clinical Charge Nurse may direct this action.
4. The patient’s name is replaced with a pseudonym on all patient detail boards in the department/ward.
5. The following staff are informed of this name suppression being actioned:
   a) Duty Manager
   b) Switchboard staff
   c) Security
6. All relevant staff within the department. This information transfers if the patient is admitted to a ward
7. This directive against the patient details is valid for the duration of the patient’s hospital visit or until appropriate personnel remove the directive.
8. Complete the name suppression documentation form.
9. The Shift Co-ordinator/Team Leader/Clinical Charge Nurse responsible for the patient’s care and/or Duty Manager will remove the name suppression at discharge or when the patient requests this.

Procedure for staff to follow when name suppression has been granted

When any staff member (including switchboard, clinical staff and volunteers) receives an enquiry about a patient for whom a “No details to be released” flag is active s/he will:

1. Ask for the caller’s name and write this down (if provided).
2. Inform the caller s/he is unable to provide any information.
3. Notify the Shift Co-ordinator/Team Leader/Clinical Charge Nurse responsible for the patient’s care.
4. Notify security (e.g. if the caller is the suspected perpetrator of an assault and police charges are likely).

**Process used to discharge a victim of abuse in a safe manner from a department or ward setting when there are high-risk safety issues**

1. Arrange the discharge plan in consultation with the guardian/patient and the discharge agency concerned, e.g. ensure the guardian speaks to the agency concerned and that all parties are in agreement with the discharge plan.
2. Complete the name suppression process as above if appropriate.
3. Ensure that the following people are informed of the discharge plan process:
   a) Duty Manager
   b) Security +/- the Police (if risk is considered high by department staff and security)
4. The discharge plan may include the leaving the ED/ward or other department by a safe route, in consultation with security staff.
5. Document the discharge plan. NB. Complete an Incident Reporting Form if any unexpected outcomes occurred.
6. Advise the Duty Manager of the discharge outcome.
### APPENDIX 11: Emergency Department child protection checklist

- **Is there a Child Protection Alert?**
  - Yes – review eProsafe notes

- **Are there any concerns for the child’s safety and/or wellbeing?**
  - Yes – discuss Senior Doctor and Social Worker

- **Does the child have an injury?**
  - Yes – complete injury assessment form

- **Date and time of injury?**

- **History taken from?**

- **Place of injury?**

- **History/mechanism of injury, what actually happened?**

- **Was the injury witnessed?**
  - Yes – by whom?

- **Consistent with developmental stage of child?**
  - Rolling / Crawling / Standing / Walking / Climbing

- **Was there adequate supervision at time of injury?**
  - Yes / No / Unclear

- **Previous injury history?**

- **Clinical Impression**

- **Clearly accidental/concern regarding supervision/unclear/inflicted**

- **The following situation must also be discussed with a Senior Doctor**
  - Any child < 18 months
  - Any child with unclear, neglectful or inflicted injury
  - Any child where there is a supervision issue
  - Any child where the developmental capabilities do not fit with the injury explanation
  - Any child you are concerned about
APPENDIX 12: eProsafe

Introduction

eProsafe is an electronic application that has been specifically designed to promote the health and wellbeing of children, adults, and their families who are experiencing abuse and neglect. It is a purpose built (web) application intended to address and overcome the fractured information technology systems both within and across formerly District Health Boards (DHBs), now Te Whatu Ora. It ensures that frontline staff, managing acute and at times severe situations of violence and abuse, can obtain information held by Te Whatu Ora in a timely manner. This enables staff to address safety concerns for children, families and staff appropriately. It also allows those Te Whatu Ora staff employed specifically to provide advice and oversight of these complex cases the ability to track the work undertaken, assess risk more accurately and ensure appropriate measures are implemented.

eProsafe is a standalone web-based application for child protection and family violence that:
- Allows DHB staff to create and manage referrals.
- Allows DHB staff to share cases across local DHB users.
- Allows C&FSS and SMHS FST staff to view referrals from Te Whatu Ora regionally.
- Provides numeric statistic reports.
- Generates sophisticated surveillance audit log reports.
- Produces announcements to local or other Te Whatu Ora users.
- Is placed within a connected health network.
- Can be accessed via Health Connect South (Orion Health)/SAP /DHB Intranet page.

*eProsafe enhances practice by*

Collating child protection and family violence information in one place which enhances risk assessment and intervention plans.

Cross referencing family information to allow health staff to see the whole picture in relation to what has occurred in the context of the family environment.

Providing staff with the ability to track cases through the use of a reminder system. This means that health staff are prompted electronically to ensure follow up tasks occur.

Assisting with ensuring that patients receive a more holistic assessment and interventions which are designed to address medical and psycho-social needs.

Improving communication between health professionals

Improving record keeping and accuracy with child protection and family violence information.

Ensuring accurate statistical information that is readily available assists with the identification of trends and patterns which allows the DHB to shape future development within services.

Providing the ability to attach documents or other related files (picture, audio) to ensure that child protection information is better collated and referrals take minimal time

Ensuring there is a quick and simple way to share child protection and family violence information between DHBs whilst maintaining security and privacy.

It will be an efficient way to share National Alert Information in a secure and private manner.
